

New T&D Graph Software Beta Available for Download

Data Management and Analysis Software for T&D Data Loggers

CHESTERLAND OH—February 2, 2012

CAS DataLoggers in partnership with high-quality manufacturer **T&D** has announced the new release of a beta version of the popular **T&D Graph software** for data management and analysis. This graphing utility software is compatible with most T&D products and offers users new features including inserting shapes, posting comments and memos on graphs, and accessing logged data stored on T&D's WebStorage Service. The new beta is available free for download directly from the manufacturer's site at http://www.tandd.com/support/download/software/TD_graph.html.

The new release is compatible with Microsoft Windows 7 32-and 64-bit, Microsoft Windows Vista 32-bit, and XP 32-bit (SP3 or above). Although still in beta, the software has working Print and Save functions which users can already work with and offers significant improvement from previous Graph software versions in terms of functionality and flexibility, for example the ability to open multiple files at once. As a beta, the user documentation is missing and will require some experimentation, but users will find it a convenient tool for working with their data.

T&D Graph has been designed as a user-friendly software which brings users even more effective features for the management and analysis of data recorded by T&D dataloggers. It contains a variety of useful functions including the ability to read and merge multiple data files and display recorded data in graph and/or list form. Users can also apply a few new features such as inserting shapes and posting comments and/or memos on a displayed graph as well as directly reading their recorded data stored in the T&D WebStorage Service.

T&D is Japan's #1 manufacturer of temperature and humidity datalogging systems, offering compact, water-proof temperature loggers for harsh environments; wireless temperature/humidity/voltage data loggers; temperature and humidity loggers with USB or Ethernet interfaces; and micro web servers. These popular products see common use in many varied applications including transportation and warehousing, food processing and storage, industrial manufacturing and processing, agriculture, and in other original applications.

The software also includes a Help menu featuring a 'Submit Feedback' option for providing users' critique and ideas directly back to the developer for use in the upcoming final version. Users are encouraged to add their input!

For more information on the new T&D Graph Software Beta, T&D wireless and wired dataloggers measuring temperature, humidity and more, or to find the ideal solution for your application-specific needs, contact a CAS Data Logger Applications Specialist at (800) 956-4437 or visit the website at www.DataLoggerInc.com.
