**New PaintView Software Monitors Oven Temperatures
to Accurately Measure Paint Cure**

CHESTERLAND, OH – August 18, 2010 – [CAS Data Loggers](#) has announced the release of [PaintView Software 2.6](#) designed exclusively for paint curing applications in the paint and finishing industry. PaintView is an easy-to-use spreadsheet style software that works with an oven temperature data logger to provide zones for optimal paint curing, to pinpoint the location of uneven temperatures within the curing process and to identify opportunities to reduce energy usage.

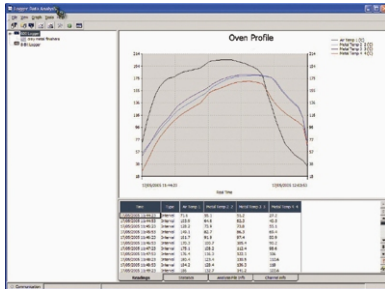

PaintView can monitor and provide feedback to control oven temperatures for optimum conditions. It also features “classic cure” and “area integration” cure analysis algorithms to measure the cure rate of many different types of paints from various paint manufacturers. A convenient graphing feature within the software offers fully annotated curves, zoom and scrolling analysis functions, which can be saved as standard reports for proof of compliance. All data can be exported into Excel or as a CSV file for customized data analysis.

PaintView is ideal for all powder coating operations including vehicle component finishers, automotive parts manufacturers, household appliance manufacturers, office furniture finishing, architectural finishing, oven manufacturers and paint suppliers.

PaintView works with the [Grant Squirrel OQ610 temperature data loggers](#) and OMK610 paint oven temperature profiling system. The OQ610 data logger is a compact, battery-operated, 6-input thermocouple data logger that was designed specifically for process monitoring. It uses a USB interface to communicate with a PC and can store pre-programmed cure data and provide a display of calculated percent cure on its built-in display. It can also connect to a printer and directly output reports for ISO9000 quality records.

For more information on the PaintView software, OQ610 Data Logger, or OMK610 Oven Temperature Profiling System, visit www.dataloggerinc.com/ovenprofile.html or call (800) 956-4437.

About CAS Data Loggers and Grant Instruments

CAS Data Loggers is a leading distributor of data logging systems with representation throughout the US and Canada. CAS provides applications assistance, training and repair for a full line of data logging products. Grant Instrument headquartered in Shepreth, England is a world leader in the manufacture of scientific equipment including temperature controlled baths and Squirrel data loggers with more than 40 years experience with the manufacture of oven recorders for the coatings industry.
