DiaLog

DiaLog is Influx Technology's data logging configuration tool.

Create complex configurations quickly and simply without any scripting.

Analyse recorded and live data in detail using the powerful oscilloscope tool.

- Construct complex data logging configurations using a simple graphical interface.
- Collect data using ISO 14229 and 15765 Diagnostic Protocols, CCP and directly from a CAN bus.
- Efficient database system allows simple administration of configurations and data.
- USB, GPRS and Bluetooth connectivity to Rebel data logger.
- Reconfigure and retrieve data by direct and remote connections.
- Live connection allows real time review of data while recording.

- A2L, ODX, DBC, MAT and CSV file support.
- Complex triggers with up to 30 conditions and 30 actions.
- User messages.
- Conversion tables and formulae provide instant scaling or conversion to engineering units.
- Configurable output signals.
- Powerful data analysis boasting aut0-scaling, XY plotting, dual cursors etc.
- GPS data plotting.
- Batch export or merging of data files.
