

## NEW FEATURE UPDATE TO THE T&D THERMO APP ADDED IOS AND ANDROID SUPPORT FOR PUSH ALARM NOTIFICATIONS

On September 17, 2021, [TandD](#) announced a long-awaited feature update to their T&D Thermo App for both iOS and Android users. In this Version 2.2 Update, background push notifications have now been enabled to send alarm warnings from the [WebStorage Service](#) to your mobile device. Please note, this is a separate function and will not replace the email notifications that the WebStorage Service sends out for warning notifications. You will need to confirm that both your phone and the T&D Thermo App have “Background Refresh” enabled in order for this new feature to function properly.

This Version 2.2 update also added support for TandD’s recently released [TR-7A series](#) of loggers. The new [TR-71A](#) temperature data logger is perfect for refrigerators and freezers with dual probes, built in WiFi, Bluetooth and USB communications and a vaccine mode to provide CDC VFC compliant monitoring.

In addition to the new push notifications and TR-7A series support, there are a number of other new enhancements to the app:

- Added a function to create a PDF report of data downloaded using Bluetooth or WLAN Direct Communication

- Added a function to output log and settings from the Settings Table Screen
- Added a function to immediately communicate with T&D WebStorage Service by swiping down at the Top screen

You can read more about Version 2.2 by clicking [here](#) and scrolling to the Revision History.
